Step 1 — Keyboard

- Flip the laptop over so that the back panel is facing up.

- Carefully remove the eight 5.7mm screws on the back panel using a Phillips #1 screwdriver.

Step 2

- Turn the laptop upright and flip the screen open.

- Using the plastic opening tool, gently pry the keyboard panel off of the base.

Step 3

- Gently raise the keyboard from the base enough to access the underside.

- Gently pull up on the locking tab to release the ribbon cable. This should take no force to complete.

- Remove the keyboard.

To reassemble your device, follow these instructions in reverse order.
