INTRODUCTION

This guide will illustrate for you how to replace the battery from a Sanyo Katana Eclipse X.

🔧 **TOOLS:**

[Flathead 3/32" or 2.5 mm Screwdriver](#) (1)

Step 1 — Back Panel

- Press the battery release button located on the back of the phone.

- With the button depressed, pull down on the battery protector to remove it from the phone.
  ⓘ The phone's battery will now be exposed.

Step 2

- Slide a thin object under the white tab located on the bottom of the battery and carefully lift away from the phone.
  - ⓘ A small, flat-tip screwdriver or credit card may be helpful for this step.

- The battery should now be free of the phone.

Step 3 — Battery

- Align the copper receptors on the back of your battery so the phone's copper receptors are touching the battery terminals.
  - ⊡ Refer to photo illustrations.

- Using your thumb, apply gentle pressure to the battery until it clicks into place.

Step 4

- Take the phone's back casing and set it over the battery.

- Apply gentle pressure, pushing towards the top of the phone until your hear a click.

To reassemble your device, follow these instructions in reverse order.
