INTRODUCTION

Do you need to replace the screen of your Panasonic Lumix DMC-GX85? Follow this guide to replace it! All you need is a Phillips head screwdriver and a plastic pry tool. As always, be careful when working on sensitive electronics, as screens are very fragile.

TOOLS:

- iFixit Opening Tools (1)
- Phillips #0 Screwdriver (1)

PARTS:

- DMC-GX85 LCD Display Screen with Shaft Flex Cable (1)

Step 1 — Display Screen

- Turn the camera so that the shutter side faces the ground and the lens faces you.
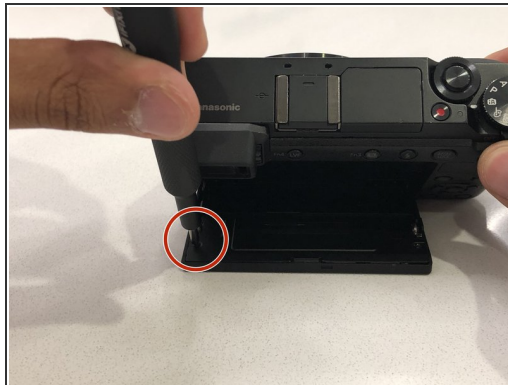

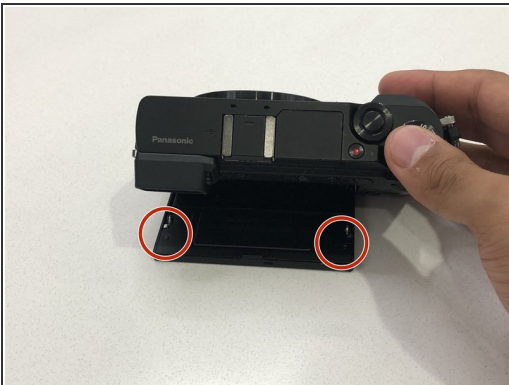

Step 2

- Remove the two 2mm Phillips #0 screws on the bottom of the screen.
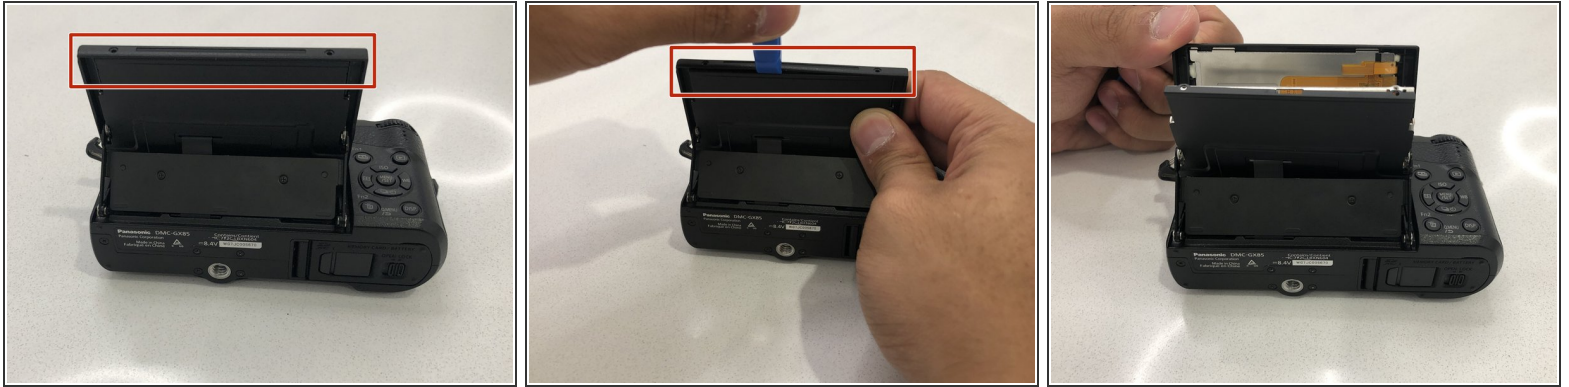

Step 3

- Swivel the screen away from the camera body so it is facing the ground.
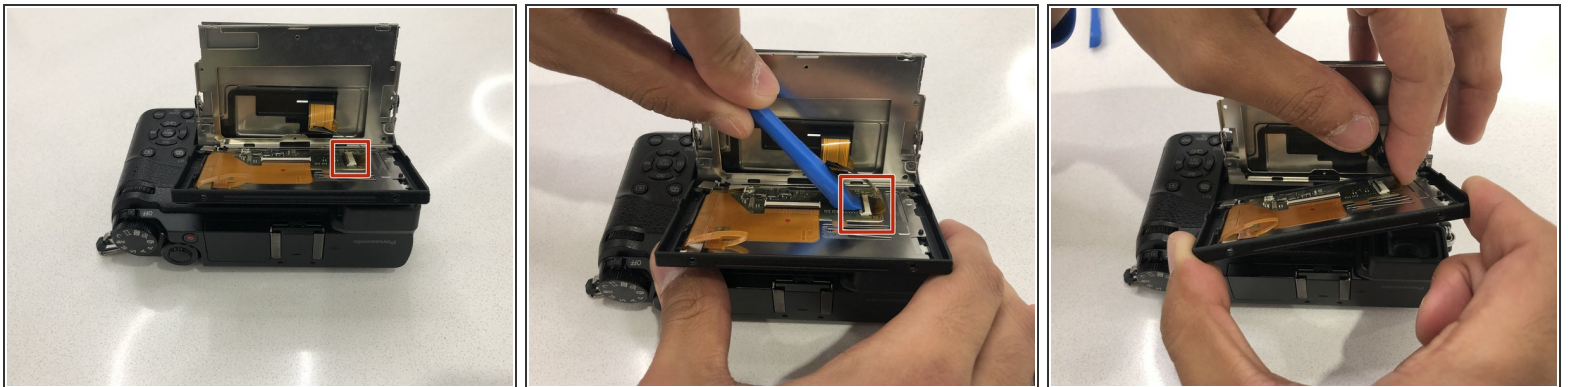

Step 4

- Remove the two 6.0mm Phillips #0 screws on the back of the screen.

Step 5

- Orient the camera so the lens is facing the ground.

- Using the gap created behind the screen at the bottom, stick the iFixit opening tool inside the gap and gently open the gap.

- Work the tool evenly around the back of the display to evenly separate the two pieces. Once the back cover is separated enough, remove it by hand.
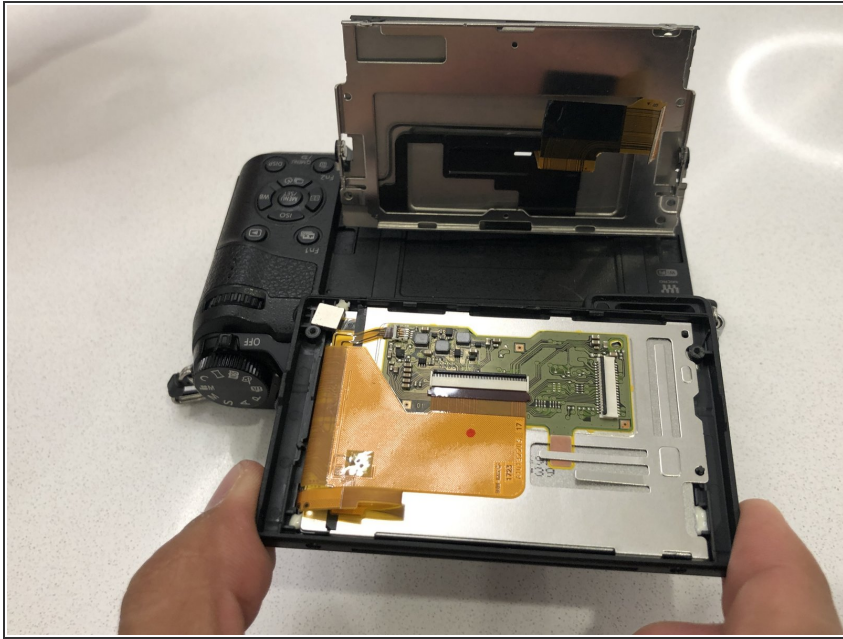

Step 6

- ⚠ Be sure to use extreme caution when handling the ribbon cable to ensure the wiring within it stays intact.

- Place the camera so that the lens is facing the ground.

- Using the iFixit opening tool, pry the black connector open and remove the ribbon.

Step 7

● Gently remove the screen from the camera body.

To reassemble your device, follow these instructions in reverse order.
