Step 1 — Battery

- Apply downward pressure to the top of the battery panel while pulling down to slide it off the phone.
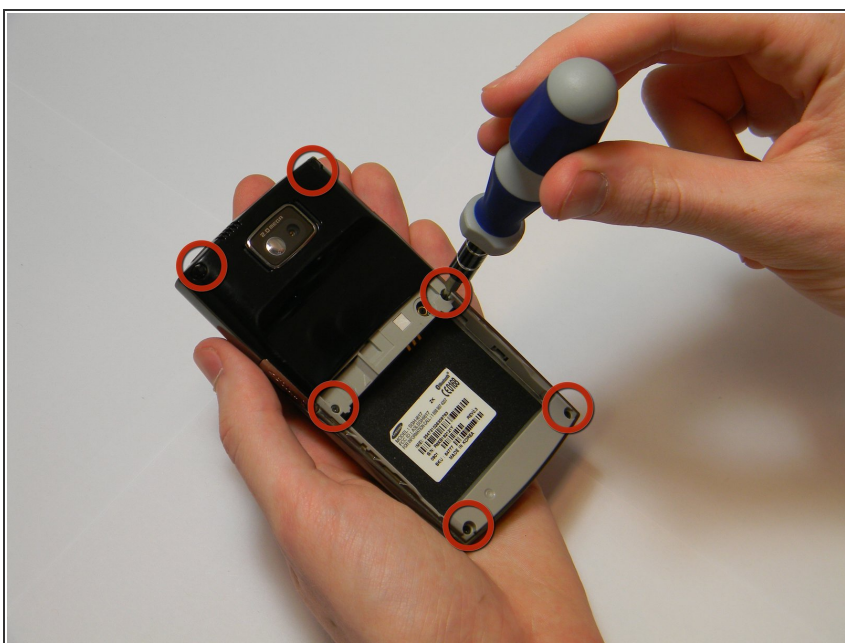

Step 2

- Locate the grooves on the sides of the battery near the bottom of the phone. Use your fingers to pull the battery up and out of the phone.
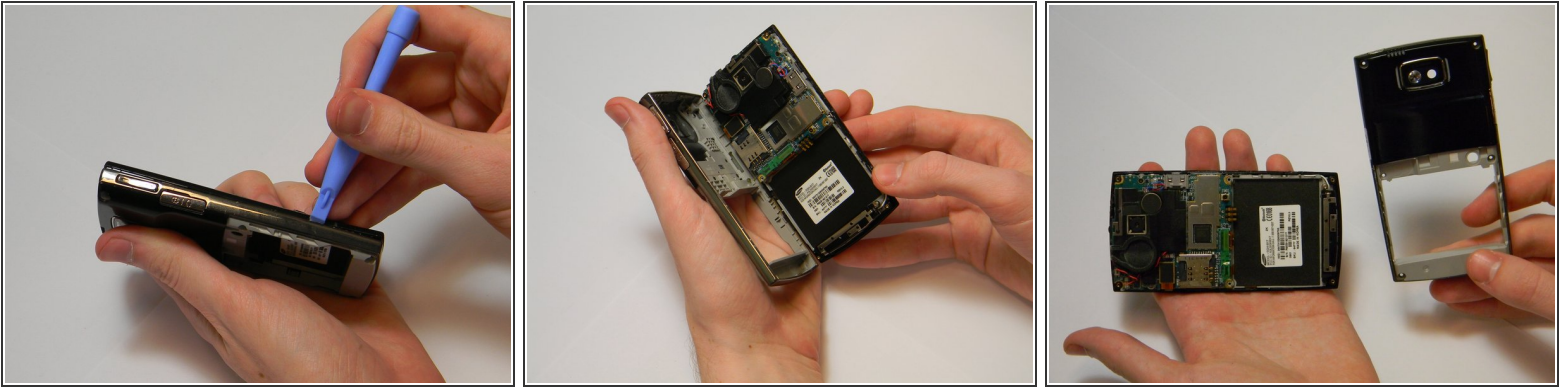

Step 3 — Back Casing

- Use the spudger to pry the two plastic caps out of the top corners of the phone casing.

- (i) To get a better grip, you may use the tweezers to finish pulling the plastic caps from the phone.
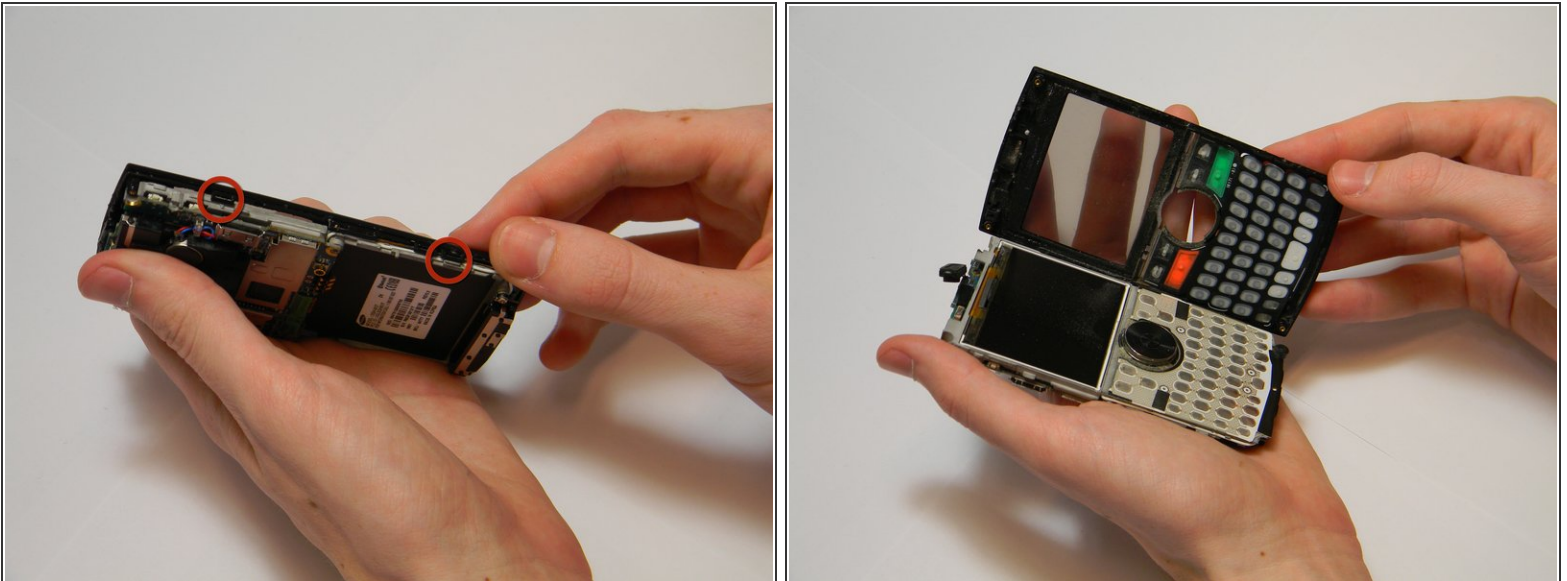

Step 4

- Remove the six 4.0 mm screws using the Phillips 00 screwdriver.

Step 5

- Insert the plastic opening tool in the gap between the back panel and rest of the body.

- Slide the tool along the edges until the two pieces come apart.

- (i) The circuit board is attached to the front casing. Both casings should separate without having to sever electrical connections.

Step 6 — Front Casing

- Pry apart the plastic tabs along the edges of the phone.

- Separate the front panel from the main body of the phone using your fingers.

Step 7 — Keypad

- Peel back the rubber keypad from the front casing.

To reassemble your device, follow these instructions in reverse order.
