

# DualShock 4 CHU-ZCT2U Touchpad Replacement

Follow this guide to replace the touchpad on a...

Written By: Sam Omiotek

## INTRODUCTION

Follow this guide to replace the touchpad on a Sony Dualshock 4 CHU-ZCT2U PlayStation controller.

---

### TOOLS:

- [iFixit Opening Tool](#) (1)
- [Phillips #00 Screwdriver](#) (1)
- [Tweezers](#) (1)

### PARTS:

- [DualShock 4 Controller Touch Pad \(CUH-ZCT2\)](#) (1)

## Step 1 — Remove the rear panel screws

- Use a Phillips screwdriver to remove the four 6.4 mm-long screws from the rear panel.

## Step 2 — Separate the rear panel

- ❗ Four fragile plastic clips hold the panels together. You can see their locations more clearly in [this guide](#).
- ❗ The clips help hold the seams together. If you break these clips, the controller will still work.
- Insert an opening tool into the crease where the front and rear panel meet, starting from the outside edge of either handle.
- Gently pry the rear panel off of the front panel until they become partially separated.

## Step 3 — Release the plastic clips

- Use the opening tool to separate the panels by releasing the plastic clips around the perimeter of the controller.

## Step 4 — Remove the rear panel

- Lift the rear panel directly away from the controller.

**⚠ Do not completely remove the rear panel. It is still attached to the controller by a ribbon cable.**

## Step 5

- Use your fingers to gently pull the ribbon cable straight out of its connector on the motherboard.
  - ⓘ Since this cable's pull tab is too small to grab with fingers or tweezers, grab the cable itself. Otherwise utilize pull tabs whenever possible.
- ☑ During reassembly, grab the ribbon cable by the blue tab and gently press the cable straight into the connector. Push the blue tab rather than the ribbon cable itself.

## Step 6 — Remove the battery

- Use a pair of tweezers to pull the battery's power connector straight up from the motherboard.

## Step 7

- Remove the battery.

## Step 8 — Remove the motherboard

- Use a Phillips screwdriver to remove the 6.4 mm-long screw securing the battery bracket.

## Step 9

- Remove the battery bracket.

## Step 10

- Use a pair of tweezers to disconnect the touch panel ribbon cable.
- ⓘ Pull the ribbon cable directly away from its connector on the motherboard by the blue pull tab, not by the cable itself.

## Step 11

- Separate the motherboard and midframe assembly from the front panel.

## Step 12 — Remove the touchpad

- Push the bottom of the touchpad in from the front side of the controller to separate it from the front case.
- Remove the touchpad from the bezel holding it to the front case.

**To reassemble your device, follow the above steps in reverse order.**
