

How to Reattach an Apron Strap

How to reattach a torn apron strap.

Written By: Magaly Valdez

INTRODUCTION

This guide will show you how to reattach a torn or broken apron strap.

A kitchen apron is used for keeping your clothes clean while cooking. It is important to do this replacement because a kitchen apron is a helpful equipment to keep yourself from getting dirty. The straps are especially important to repair because they are the main important part of holding the whole apron together.

Step 4 has a caution, might poke yourself with the sewing needle.

Before beginning make sure all your tools are available to you.

TOOLS:

- [Utility Scissors](#) (1)
 - [Hand Sewing Needle](#) (1)
 - [Flat iron](#) (1)
 - [Sewing Kit](#) (1)
-

Step 1 — How to Reattach an Apron Strap

- Use a thread color that matches your article of clothing (or whatever color you like).
 - Cut a piece of thread around 21 centimeters long.
 - Insert one side of the thread in the eye of the sewing needle.
- i** You can wet the thread a bit to make it easier to insert in the hole.
- i** It may help to thread the needle against a background with a contrasting color to make it easier to see.

Step 2

- Pull the thread to make sure it is in the hole.
- Make sure the apron is aligned correctly.
- Insert the needle from where you want to start to repair the fabric.
- Begin from right to left.

Step 3

- Once inserted, make a knot so the thread can't move. Pull the thread as far as possible but still able to create a knot.
 - Insert the threaded needle a short distance from where you began, starting again from right to left.
- i** Making two knots instead of one is helpful so it can last longer.

Step 4

 Use caution when handling a sharp needle.

- Continue sewing from right to left, starting each new stitch a few centimeters from the previous stitch.
- Make sure the thread goes all the way through.

Step 5

- Once you reach the end of the left side, make two small knots.
- Begin from the bottom and pull to tighten the knot.
-  The knot should be small and tight enough to not be able to rip.

Step 6

- ❗ Make sure the knot is not loose.
- Cut the excess thread with a pair of scissors.

Step 7

- Make sure the apron is aligned correctly and not loose from both sides.
- Tug on the strap to make sure it is not loose.

Step 8

 You can iron the apron to make sure it is correctly aligned, but this step is optional.

- Lay the strap down carefully and iron from the bottom to the top.
