INTRODUCTION

Fix the problem "This update requires macOS 12.0 or earlier." Or install printer drivers on macOS. (Pilots, Drivers)

Step 1 — Install macOS Printer Drivers

- Find the driver for your printer brand on the link below:

  - https://support.apple.com/kb/index?page=...

- Download the driver for your printer, by clicking on the " **Download**" button.

⚠ If the message: "This connection is not private" appears, open the page with the private mode of your browser.

Step 2

- Open your **.dmg** file

- Open your **.pkg** file

- If this message appears: **"This update requires macOS 12.0 or earlier."** click **Close** and continue with the next step.

- Otherwise, continue with **step 7**.

This document was generated on 2022-06-26 03:56:11 AM (MST).

Step 3

- Move your **.pkg** file to your desktop

- Open **Terminal**

- Enter: **cd Desktop**/ then press the **Enter** key
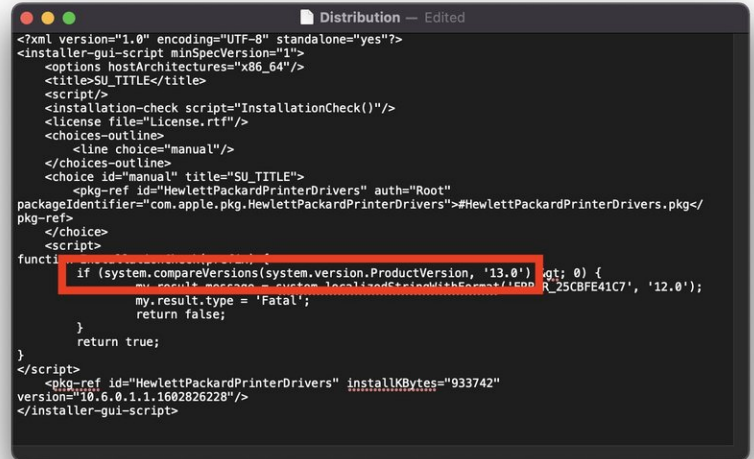

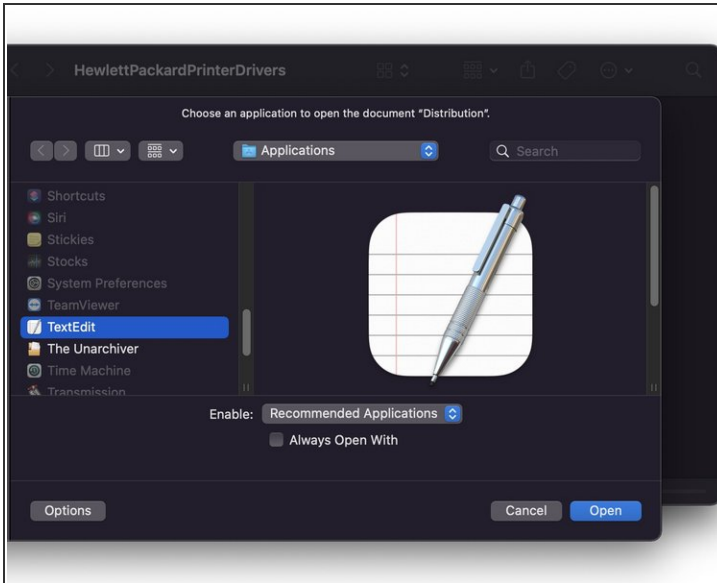

Step 4

- Enter the following command: **pkgutil --expand FileName.pkg FileName**

⚠ Change **FileName** to the name of your file, in both places.

- Then press the **Enter** key.

- A folder with the file name appears on your desktop.

- Open the folder.

This document was generated on 2022-06-26 03:56:11 AM (MST).

Step 5

- Open the **Distribution** file with **TextEdit**

- Then change the number after (system.compareVersions(system.version.ProductVersion, '**12.0**')"
 to that of your macOS version or later.

- Save the file and close it.

Step 6

- Return to the **Terminal**

- Enter the following command: **pkgutil --flatten FileName FileName.pkg** and press the **Enter** key.

- Close the**Terminal** and open **FileName.pkg** on your desktop.

Step 7

- Congratulations, you can proceed with the installation by following the steps one by one.
