Step 1 — Battery

- Remove the two Phillips screws securing the battery cover to the back of the handheld console.
- Lift the battery cover off the back of the DSi XL.

Step 2

Lift the battery from the DSi XL.

Step 3 — Lower Case

Remove the four rubber screw covers on the lower case by prying them up with a push pin.

- Remove the following seven Phillips screws that secure the lower case to the rest of the DSi XL:
 - Four silver 5.3 mm screws
 - Two black 5.3 mm screws
 - One black 2.5 mm screw

- (i) Turn the DSi XL over, and open the display.
- Insert a spudger between the upper and lower case at the bottom left corner of the DSi.
- Slide the spudger along the bottom edge of the upper case to release the latches securing the upper case to the lower case.

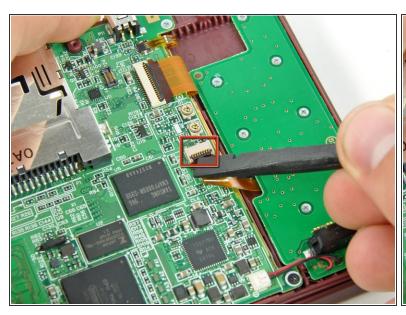

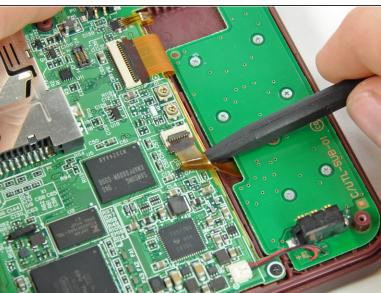

- (i) Close the display and turn the DSi XL over.
- Lift the lower case from the front edge.
- Rotate the lower case away from the DSi.
- (i) The lower case cannot be completely removed yet, since it is still connected to the motherboard.

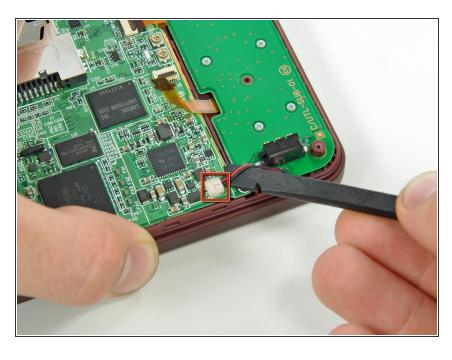

- Using a spudger, pry the SD card/right shoulder button connector off its socket.
- Pry the volume button/left shoulder button connector off its socket on the motherboard with a spudger.

Step 8 — Power Board

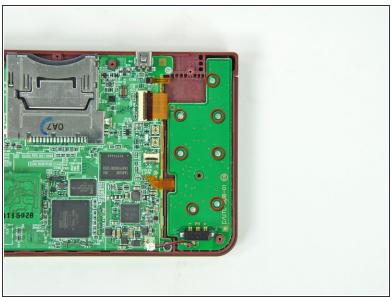

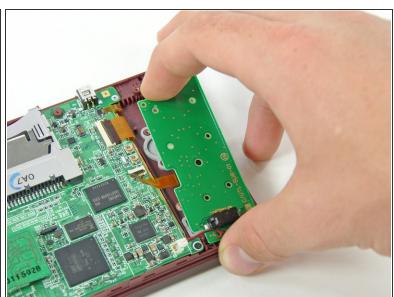

- Using the flat end of a spudger, flip up the retaining flap on the ZIF connector for the D-pad/power button cable.
- With the pointed end of the spudger, pull the D-pad/power button cable from its connector on the motherboard.

- Using the flat end of the spudger, carefully pry the battery cable out of its socket on the motherboard.
 - ⚠ Use caution, as the wires are very fragile and could come out of the connector if pulled on too hard.

- Remove the seven 2.5 mm silver screws securing the power board to the upper case.
- Lift the power board off the upper case.

To reassemble your device, follow these instructions in reverse order.
