

Smart Parts Ion De-Gassing

This guide will show you how to de-gas your Smart Parts Ion paintball gun.

Written By: Shane Villalpando

Step 1 — Smart Parts Ion De-Gassing

- Turn the gun on by pressing the power button until the red light blinks.
- Turn vision mode off by pressing the power button again.
- ⓘ Red light should be flashing in a double blink sequence.

Step 2

- Pull the trigger to release the air in the gun.
- ⚠️ Pressurized air can be forceful, causing particles to be ejected from the gun into your eyes and/or skin. When air bubbles enter the bloodstream, they can block blood vessels, causing embolisms. To avoid this, make sure to point the gun in a safe direction when pulling the trigger because air will be released from the gun.

To reassemble your device, follow these instructions in reverse order.
