

# Canon AE-1 Film Rewind Crank Replacement

This guide will teach a user how to replace a...

Written By: Ben Barber

## INTRODUCTION

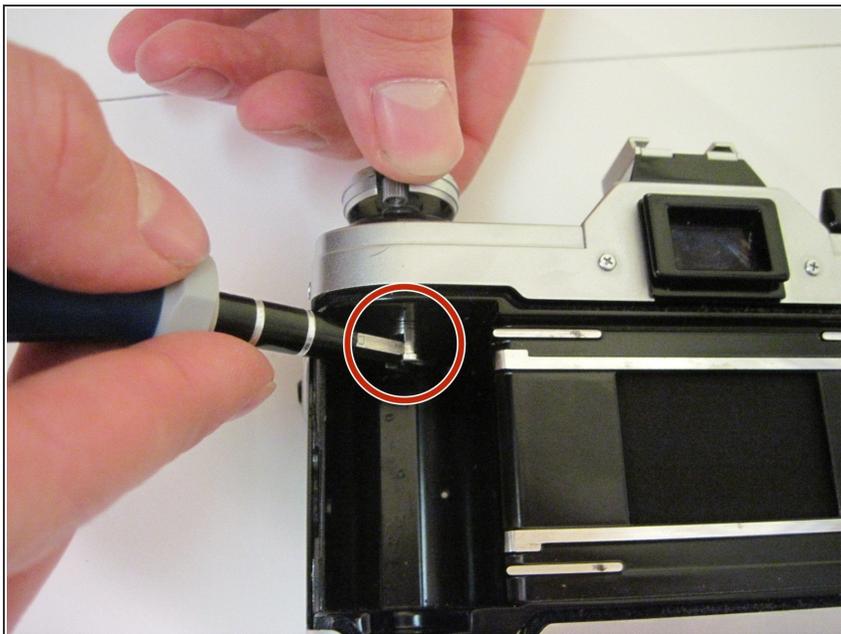

This guide will teach a user how to replace a broken film rewind crank on the Canon AE-1 SLR. The film rewind crank allows the photographer to reel film back into its container once all exposures have been shot so that the film can be developed.

---

### TOOLS:

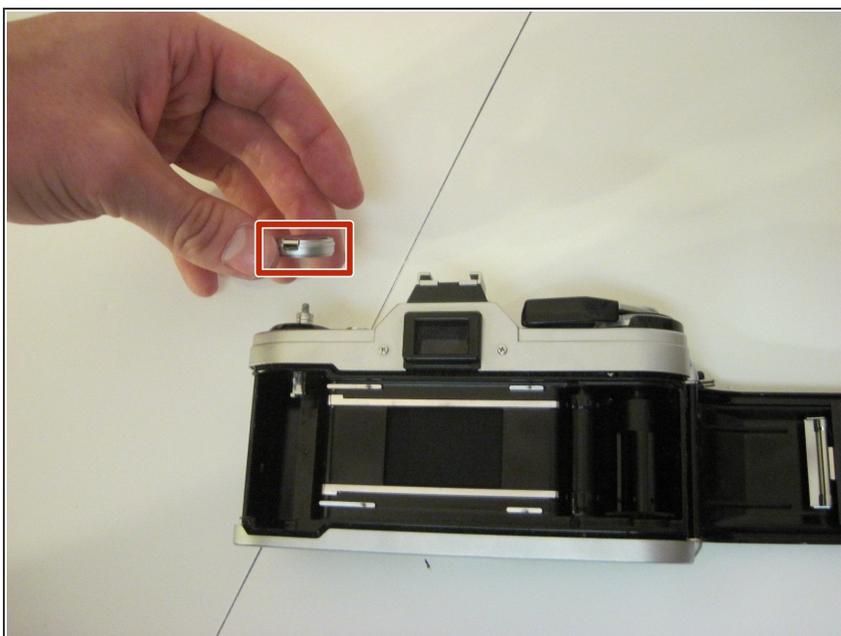

- [Phillips #00 Screwdriver \(1\)](#)
  - [Flathead 3/32" or 2.5 mm Screwdriver \(1\)](#)
-

## Step 1 — Film Rewind Crank

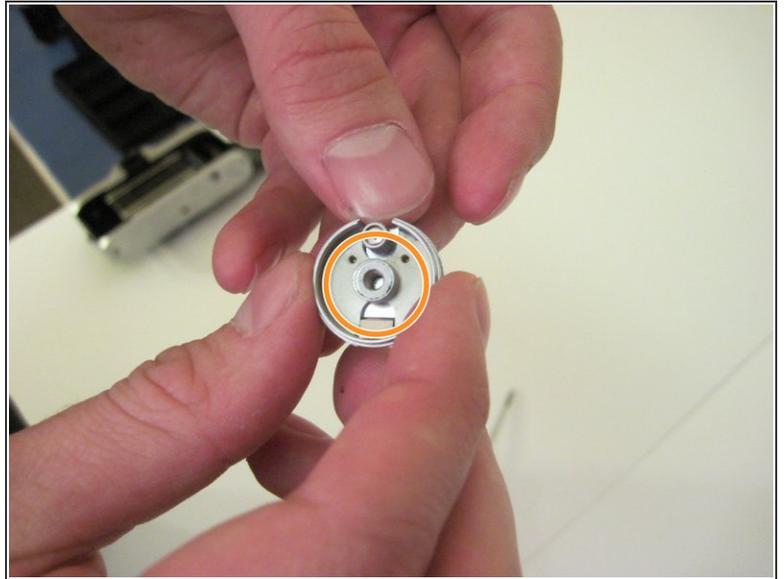

- Open the film compartment and place the screwdriver in the the slot to keep the shaft from moving.

## Step 2

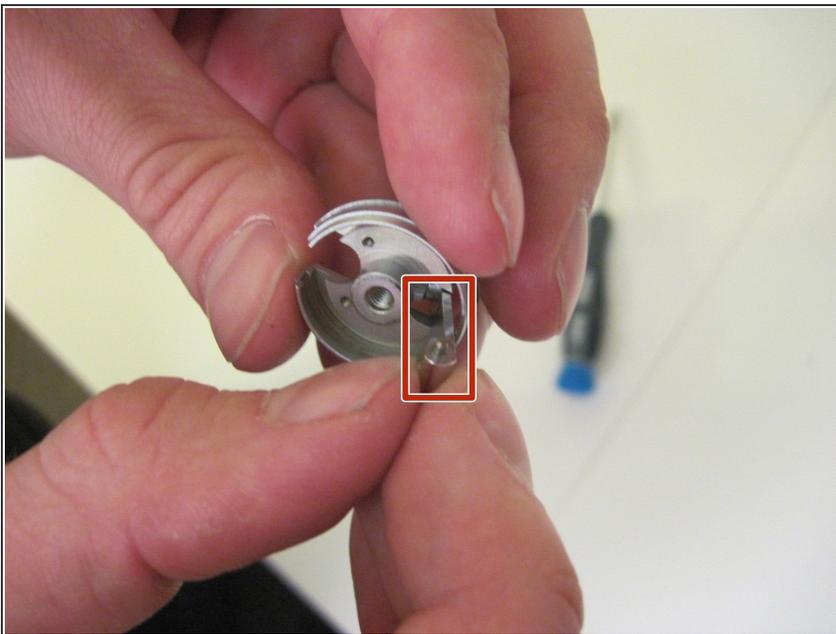

- Remove the crank by rotating it counter-clockwise.

### Step 3

- Remove two phillips screws
- With the screws removed, the silver plate can now be removed as well.

### Step 4

- Remove the film rewind crank.

To reassemble your device, follow these instructions in reverse order.
