---

## INTRODUCTION

Make sure you have a replacement board before starting. Refer to the these sites for replacement parts. <http://www.palmmediccanada.com/pm1xx.htm> or [http://www.directfix.com/category/\\_PM1.h...](http://www.directfix.com/category/_PM1.h...)

---

### TOOLS:

- T5 Torx Screwdriver (1)
-

## Step 1 — Motherboard

- Start with your intact Palm m105.

## Step 2

- Remove protective flap by pulling directly out from the top.
- The two clips will pop out

### Step 3

- Remove Faceplate. There is a tab where the finger is located in the picture that needs to be pulled up.
- The Faceplate will then easily lift off

### Step 4

- Using a T5 Torx bit screwdriver, remove the four screws located on the back of the device turning counter clockwise.
- The link to purchase this screwdriver is Located here.

## Step 5

- This is what the device looks like once you have taken the screws out and opened the device.

## Step 6

- The Motherboard and screen will pop out of the back case easily.
- Be careful when doing this step, the components are fragile.

## Step 7

- To remove the screen from the motherboard there are going to be three tabs that need to be pulled up.
- \*\* This step needs to be done with special care because it is very fragile.\*\*
- Once they are all three popped up the motherboard and screen will separate easily.

## Step 8

- Click here for [Palm m105 motherboard replacement](#)
- Now that the screen and motherboard are separated you may discard the broken screen. The best way to dispose of the broken screen is to: [Recycle it](#)

To reassemble your device, follow these instructions in reverse order.
