Step 5

- Remove top case from the bottom case.

- (i) The compact nature of the casing requires use of the metal spudger for needed leverage.

Step 6

- Remove the two 5mm screws using the Torx T5 screwdriver

- (i) By removing the screws, the metal battery frame will now become free from the rest of the device.
Step 7 — Motherboard Components

⚠ This step shows the use of an incorrect tool. Always use an ESD safe tool, like a nylon spudger, when working with delicate internal components.
- Use the nylon spudger to pry the corner of the case off of the motherboard.
Step 8

- Remove the metal case off of the motherboard.
Step 9

- Remove the battery connection.

Step 10

- Remove the three 5 mm screws using the Torx T5 screwdriver.

Step 11

- Use tweezers to remove the connector on the top right of the motherboard.

Step 12

- Remove the motherboard from the case and flip to reveal SD connection.

- Use tweezers to remove the connector next to the SD card slot.

Step 13

● The motherboard is now removed aside from the copper strip and its connector.

● Disconnect from the front case and the copper strip.

To reassemble your device, follow these instructions in reverse order.
