

# Tea Kettle Switch Replacement

It is not an unusual problem: the switch of your kettle pops out of its container and you're not able to put on your kettle anymore.

Written By: Anniek Moll

 **TOOLS:**

- [Phillips #2 Screwdriver](#) (1)
-

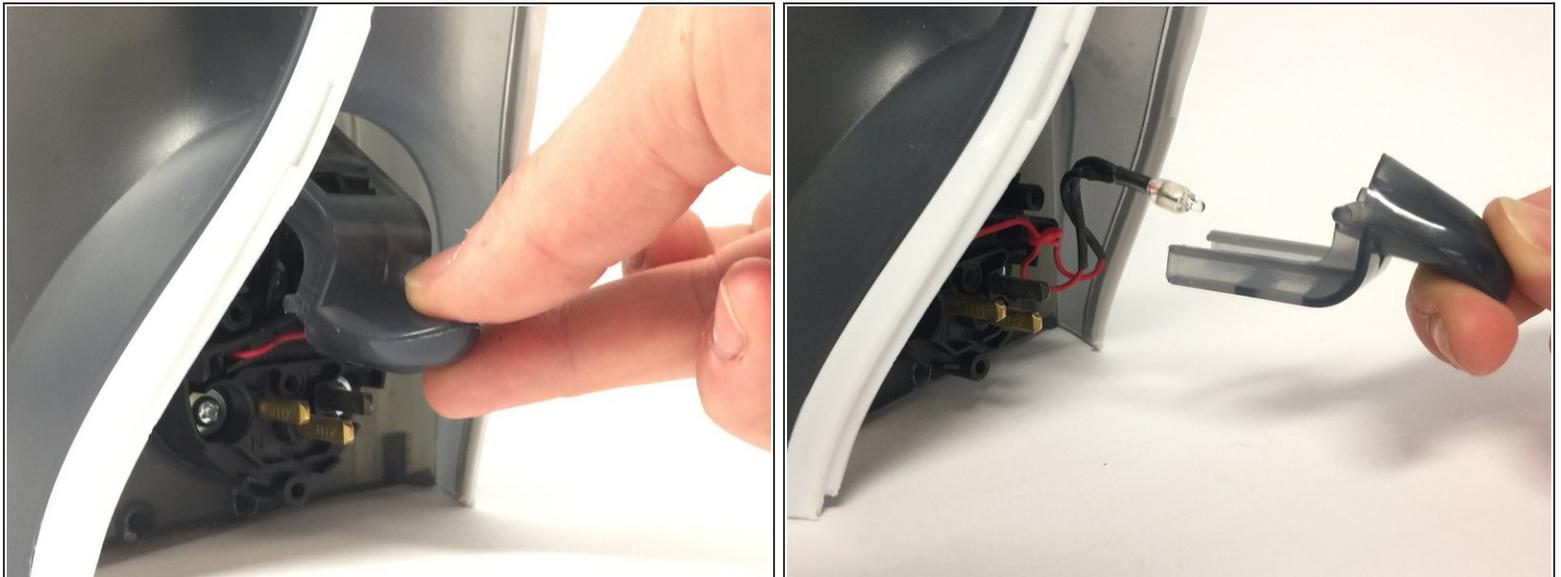

## Step 1 — Switch

**⚠** Before you start, disconnect the device from its power source.

- Remove the two bottom screws.
- Remove the two top screws.
- Remove the handle from the kettle.

## Step 2

- Pull out the switch.

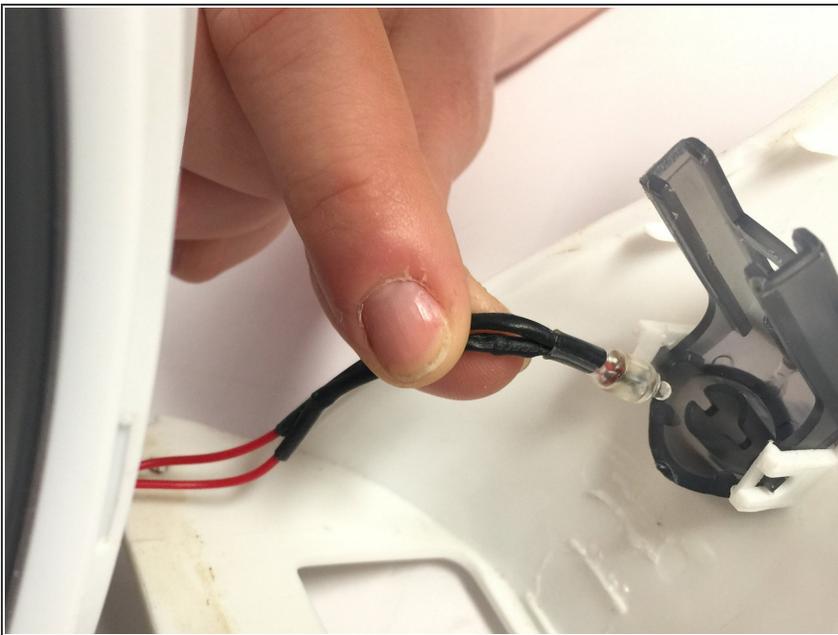

**⚠** If you pull too hard, you may dislodge another part as well as the spring that are both positioned behind the switch.

### Step 3

- Click the replacement switch back into the handle part.

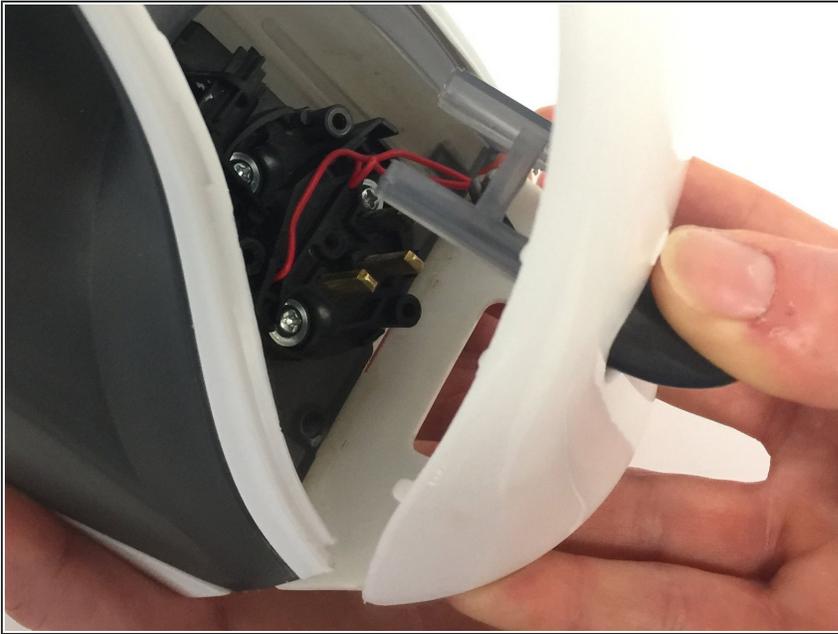

### Step 4

- Insert the light back into the switch.

**⚠** This might take some extra attention, so be precise.

## Step 5

- Place the handle part back on the frame.

## Step 6

- Plug in the kettle.
- Press down on the switch to check if it works again.

To reassemble your device, follow these instructions in reverse order.
